

# **The Regional Training Workshop on Methodologies for Coastal Inventories & Information Management**

## **Appendix I**

---

### **Critical Issue Driving the Implementation Process of Component 3: Inventory of Coastal Resources and Uses.**

1. The implementation of the C3 project component should be a process rather than a series of scheduled events.
2. The implementation process should be client driven.
3. Coastal resource and use inventories should be developed around country needs.
4. The implementation process must build capacity across the continuum of experiences in the region.
5. NGO's should participate in the planning and implementation of the C3 Component, particularly in the supporting public awareness activities
6. The uses to which information generated by the inventory of coastal resources and uses will be put, must be clearly defined during the design phase of the inventory
7. The C3 implementation process must bring professionals and practitioners in the region together, to work and share experiences, thereby developing an infrastructure of talent across the region.
